

# Make your hunting season easier!

Use the revolutionary and special designed sleigh;

“The Terrain Sleigh Canada is special designed for hunters to make it easier to transport the animals. However due to its features it can also be used to transport timber or other objects.”

The sleigh is easy to handle and drag over any type of terrain.

The sleigh is easy to keep clean, is extremely durable and impact resistant.

The total weight is approximately 31 lbs.

Material: 0,3 in thick HD-Polyether

Length: 91,9 in

Width: 35,4 in

Weight: approx 31 lbs.

Price: See website

Distributor: DECE-Trade

The Terrain Sleigh **CANADA** is tested by a licensed game act during several hunting seasons. With the hunters help we developed the special features that the Terrain Sleigh **CANADA** has. Among other qualities the Terrain Sleigh **CANADA** also helps you save a lot of energy while transporting animals, timber or other things. The Terrain Sleigh **CANADA** also works perfectly for farm work or for transporting other heavy things in terrain.

The special design makes the Terrain Sleigh **CANADA** hygienic to use, since no dirt will reach the animal. The sleigh will also protect the animals' fur from getting ruined while dragged. After use, the Terrain Sleigh **CANADA** is very easy to clean.

The Terrain Sleigh **CANADA** is also tested for timber dragging by a tractor or other vehicle. Again the special designed features will make the work easier; the timber won't get stuck or get destroyed by the terrain.

The animal, timber or other object won't fall off the sleigh when the drag rope is drawn through the hole in the front of the sleigh and then around the object.

The ropes on the inside of the sleigh could be used to secure the animal on the sleigh, or back sacks and other hunting equipment.

Due to the round front of the Terrain Sleigh **CANADA** it's easy to drag and it follows the terrain without getting stuck on stones etc.

The plastic material HD Polyether, of which it's made, works well in all kinds of weather conditions. The Terrain Sleigh **CANADA** can get squeezed through trees or stones, and it can be dragged over all types of terrain without breaking!

The features of the Terrain Sleigh **CANADA** are much better in comparison to a sleigh made out of glass fiber. HD Polyether is much lighter and more durable.

The Terrain Sleigh **CANADA** is easy to handle and the total weight is only 14 kg (approximately 31 lbs).

The Terrain Sleigh **CANADA** is easy to transport inside station wagons or on top of cars.

# USERS MANUAL

Warning! The sleigh slides very easily on snow, so be aware if you are going to stop the sleigh especially if it's pulled by a snowcat!
